## CROP MARK DETECTION

# GUNNAR CROP MARK DETECTION

## CROP MARK DETECTION

Empowerment to reach a new level of productive excellence. An addition to GUNNAR's award winning, highly sophisticated and most reliable mat cutting concept.

## MAIN APPLICATION

• Automatic detection of several print, cut and crop marks on different material surfaces

## PRODUCT CHARACTERISTICS

• High resolution optical vision sensor

• Built in flash for environmental light influence compensation

• Recognises many different types of print, cut and crop marks

• Teachable recognition algorithm for individualised crop mark recognition

• Auto-find function for even faster overall crop mark detection

• Material edge detection

• Enhanced file import for SVG, DXF, PDF and more data formats

• System also available as upgrade kit for existing GUNNAR cutting machines
